

Loading Data

Data Loading Options

- Data loading via SQL*Net
 - Suitable for small volumes of data
 - SQL*Loader from local filesystem
 - ETL scripts that use DML to insert/update data
- Data loading from Oracle Object Storage
 - Preferred technique for large volumes of data
 - Additionally enables data-sharing with other cloud services
 - Stage data in Oracle Object Storage, then load into the database using new PL/SQL APIs
- Comprehensive UI Support with SQL Developer

Loading Data from Object Stores

- Source data from files on object stores for data loading
 - OCI Object Storage, OCI Object Storage Classic, AWS S3, or Microsoft Azure
 - Any supported ORACLE_LOADER file format
 - Roadmap: any Hadoop file format

New Cloud API to Access Object Stores, DBMS_CLOUD

- New PL/SQL package for accessing files in object stores
- No need to manually define external tables for loading files
 - Makes it easier to specify the format of the source data

```
CREATE TABLE admin_ext_employees
(
  employee_id      NUMBER(4),
  first_name       VARCHAR2(20),
  last_name        VARCHAR2(25),
  job_id           VARCHAR2(10),
  manager_id       NUMBER(4),
  hire_date        DATE,
  salary           NUMBER(8,2),
  commission_pct   NUMBER(2,2),
  department_id    NUMBER(4),
  email            VARCHAR2(25)
)

ORGANIZATION EXTERNAL
(
  TYPE ORACLE_LOADER
  DEFAULT DIRECTORY admin_dat_dir
  ACCESS PARAMETERS
  (
    records delimited by newline
    badfile admin_bad_dir:'empxta%p.bad'
    logfile admin_log_dir:'empxta%p.log'
    fields terminated by ','
    missing field values are null
    ( employee_id, first_name, last_name, job_id, manager_id,
      hire_date char date_format date mask "dd-mon-yyyy",
      salary, commission_pct, department_id, email
    )
  )
  LOCATION ('empxt1.dat', 'empxt2.dat')
)
PARALLEL
REJECT LIMIT UNLIMITED;
```

Loading Data from the Oracle Object Store

- Define your credentials for the object store
 - Oracle Cloud Infrastructure Object Store username and Swift password required
- Credential stored in the database schema once and used for accessing the object store for all loads

```
begin
  dbms_cloud.create_credential(
    credential_name => 'OBJ_STORE_CRED',
    username => 'tenant1',
    password => 'password'
  );
end;
/
```

Loading Data from the Oracle Object Store

- Load data directly into the target table without any intermediate steps
- Data format in the source file easily specified as JSON

```
begin
  dbms_cloud.copy_data(
    table_name => 'CHANNELS',
    credential_name => 'OBJ_STORE_CRED',
    file_uri_list => 'https://swiftobjectstorage.us-ashburn-
1.oraclecloud.com/v1/dwcsdemo/DEMO_DATA/chan_v3.dat',
    format => json_object('ignoremissingcolumns' value 'true',
                          'removequotes' value 'true')
  );
end;
/
```

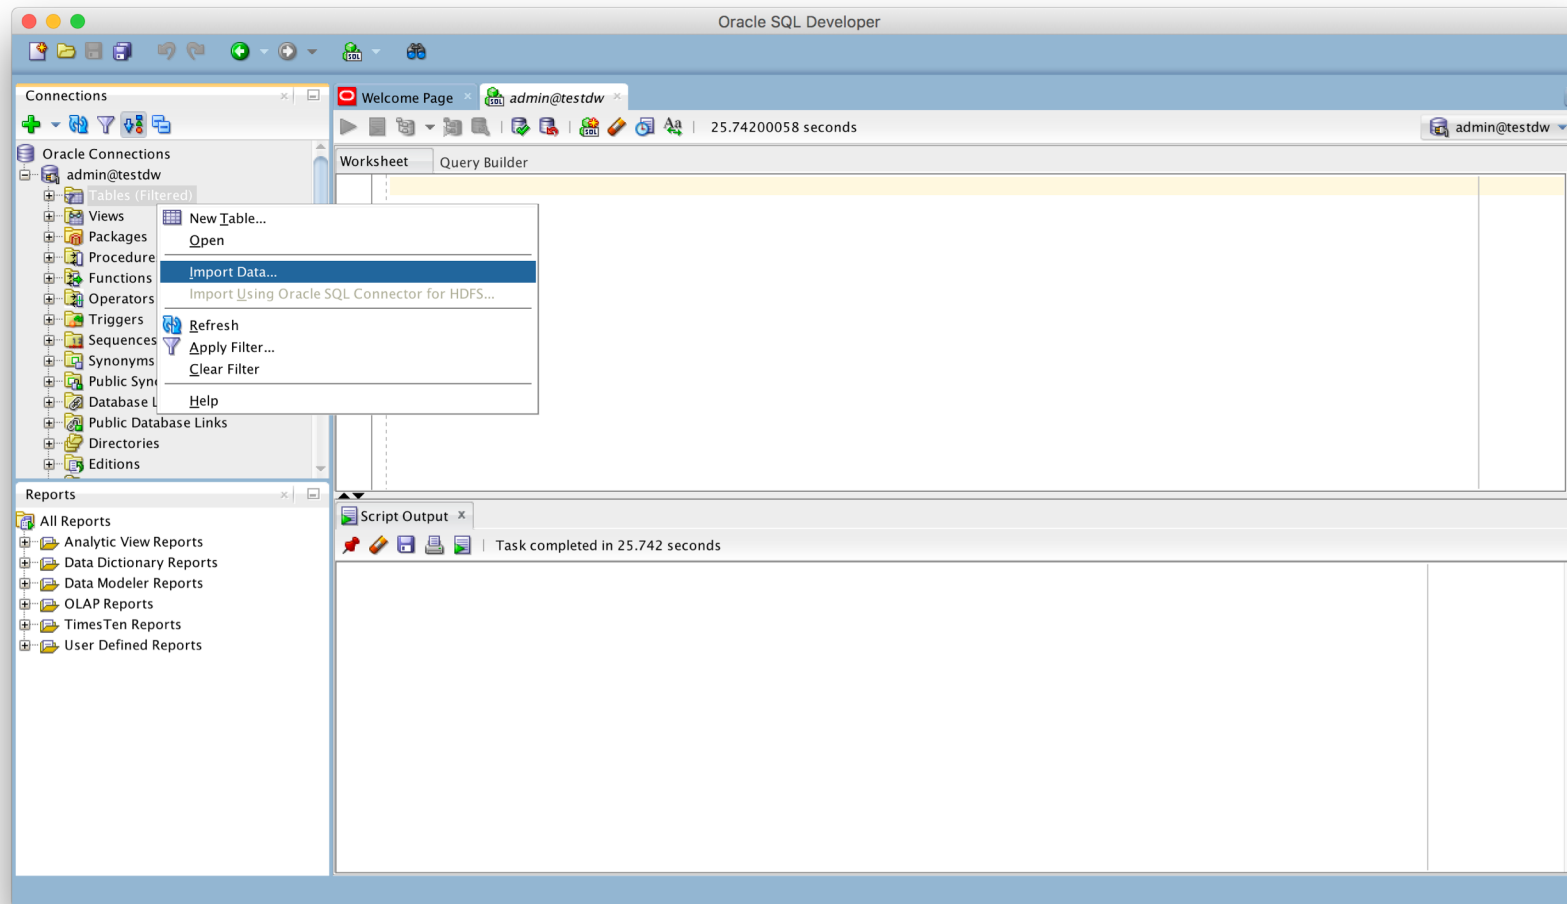

Troubleshooting Loads

- Load operations logged for troubleshooting and historical load tracking
 - New table user/dba_load_operations
- Log and bad files accessible as tables

```
select table_name,status,rows_loaded,logfile_table,badfile_table
from user_load_operations;
```

TABLE_NAME	STATUS	ROWS_LOADED	LOGFILE_TABLE	BADFILE_TABLE
CHANNELS	FAILED		COPY\$1_LOG	COPY\$1_BAD
CHANNELS	COMPLETED	5	COPY\$2_LOG	COPY\$2_BAD

Supported by a rich Data Warehouse Ecosystem

Oracle Autonomous Data Warehouse supports:

- **Existing tools** running on-premise or in Oracle Cloud
 - Oracle BI and data-integration tools
 - 3rd party BI tools
 - 3rd party data-integration tools
- Connectivity via SQL*Net

Oracle Cloud Services

- Oracle Analytics Cloud
- Oracle Data Integration Platform Cloud
- and others...
