ORACLE

Oracle Autonomous AI Lakehouse

Fully-Managed Cloud-Native AI-Enhanced Data Platform

Name

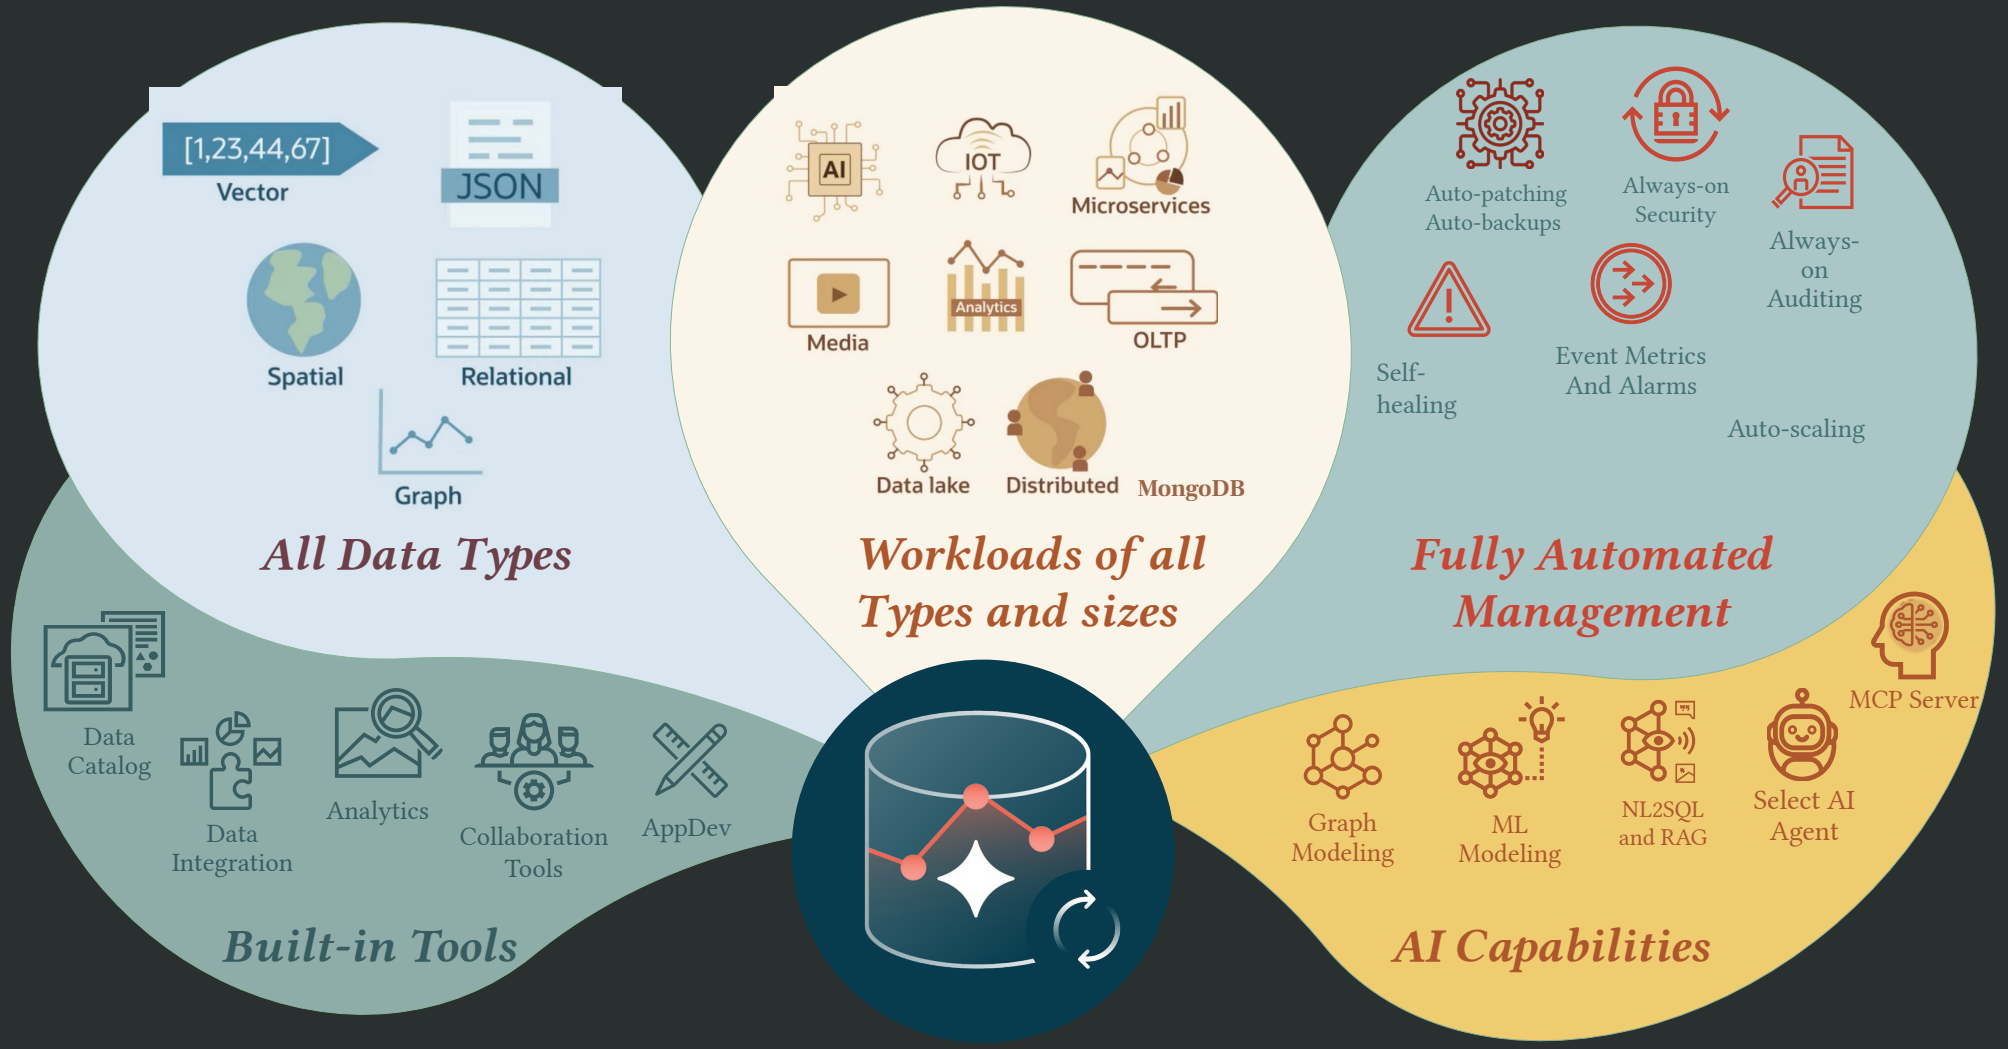

Title

Last Updated June 2026

Oracle Autonomous AI Database

Modern, fully-managed, cloud-native, AI-enhanced data platform that automates data management.

Copyright © 2026, Oracle and/or its affiliates

What can Autonomous AI Database do for you?

Simplify, Secure and Modernize Data

Lower costs

- Lower costs using one fully automated database
- Automated database admin
- One database service for every workload
- Scale elastically and pay only for what you need

Minimize Risk

- Minimize data security risks and downtime
- Automated threat detection and response
- 99.995% application availability
- Automation reduces security and downtime risks

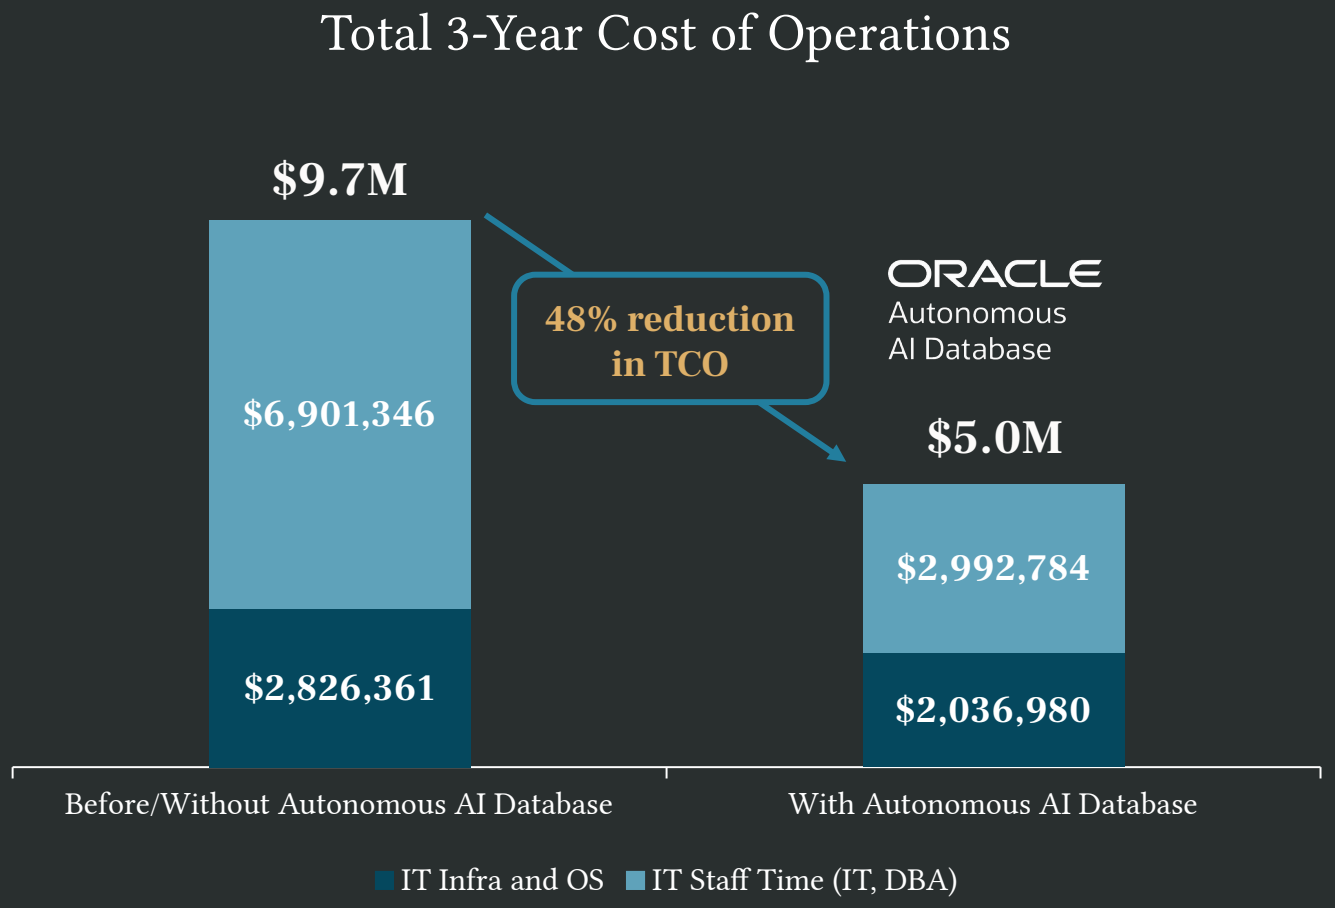

Empower Developers

- Empower your developer community and business teams
- Query data with natural language
- Use AI on all of your data with AI Vector Search
- Build and manage AI Agents, including pre-built ones like a Data Science Agent

Copyright © 2026, Oracle and/or its affiliates

Halve Your Costs with Autonomous Database

Autonomous AI Database lowers TCO for every customer

$103,000
Average annual benefit per Autonomous AI Database

436%
Three-year return on investment

5-month
Payback on investment

Your opportunity

Do more with less effort. Automate, simplify, modernize

Upgrade your cloud VMs running Oracle Database

Move and improve your on-premises Oracle workloads

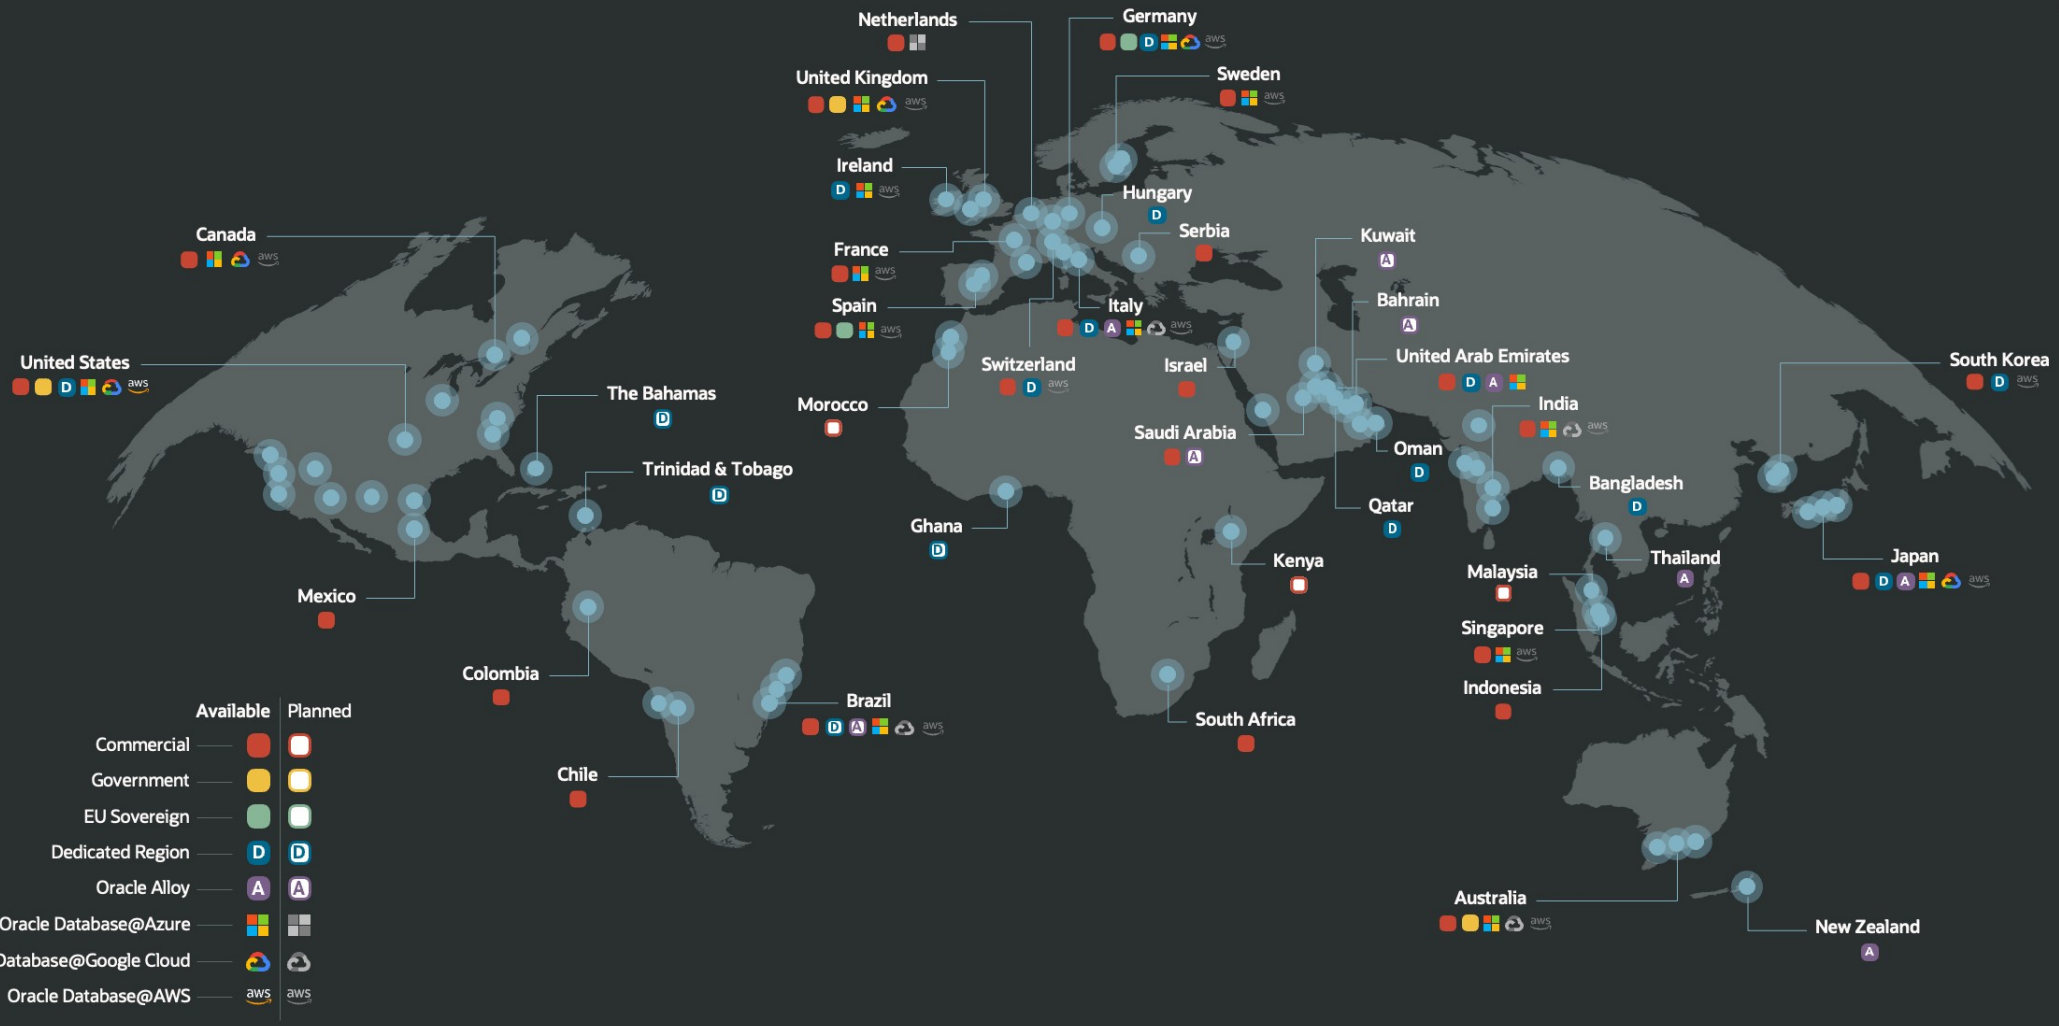

Develop new modern intelligent application

Copyright © 2026, Oracle and/or its affiliates

Oracle Cloud Infrastructure runs on Autonomous AI Database

- Autonomous Database is built into the foundation of every OCI Data Center
- Every login, every API call, every console action on OCI relies on Autonomous Database

Copyright © 2026, Oracle and/or its affiliates

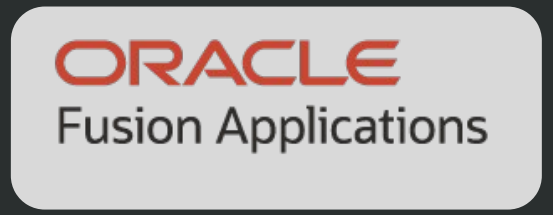

Autonomous Database was released in 2018

Today it powers 1000s of global enterprises for both OLTP and analytic workloads

Copyright © 2026, Oracle and/or its affiliates

Oracle SaaS runs on Autonomous AI Database

Fusion EPM, Warehouse Management, CX Unity and newly-provisioned Fusion suite use Autonomous AI Database ***today***

Existing Fusion customers migrating in 2026 -- a total of more than 24,000 Databases

---

NetSuite uses Autonomous AI Database *today*

Over 4,700+ customer Databases already migrated

Oracle Industries (vertical apps) have 117 cloud services certified on Autonomous AI Database ***today, with 788k+ customers migrated*** *and* ***7,000+ Autonomous AI Database instances***

All strategic Oracle Industries cloud services to run on Autonomous AI Database

Copyright © 2026, Oracle and/or its affiliates

Autonomous AI Database Subscription Options

Simple price structure: Pay As You Go or Universal Credits

Also available:

- **Bring-your-own-license (BYOL):** Use existing on-premise Oracle Database licenses and save 75%
- **Mix-and-match:** Combine BYOL and license-included to ensure that BYOL limits are not exceeded

Pay per Database

- Starts at 2 ECPU's
- Each database is billed independently
- Available as license-included or BYOL
- BYOL includes Transparent Data Encryption, Data Safe, Partitioning, Advanced Compression, and select management packs at **no additional cost**

Pay per Elastic Pool

- Starts at 128 ECPU's
- Aggregate dozens of hundreds of databases into a single bill
- Up to 4-8x cost savings vs per-database pricing
- No changes to database functionality, scalability or performance
- Available as license-included or BYOL

Copyright © 2026, Oracle and/or its affiliates

What is Autonomous AI Database?

1 **Fully Managed**

No administration required

2 **Lakehouse and Data Tools**

Everything for data-driven applications in one service

3 **Included AI Capabilities**

Built-in SELECT AI for NL2SQL, RAG and Agentic requirements

4 **Cloud Native**

Elastic scalability and built-in cloud integrations

Copyright © 2026, Oracle and/or its affiliates

Top 10 Capabilities of Autonomous AI Database Technology

1 Auto-Provisioning
Automatically deploys mission-critical databases (RAC on Exadata infrastructure) which are fault-tolerant and highly available. Enables seamless scale-out, protection in case of a server failure and allows updates to be applied in a rolling fashion, while apps continue to run.

2 Auto-Configuration
Automatically configures the database to optimize for specific workloads. Everything from the memory configuration, the data formats, and access structures are optimized to improve performance.
Customers can simply load data and go.

3 Auto-Indexing
Automatically monitors workload and detects missing indexes that could accelerate applications. It validates each index to ensure its benefit, before implementing it and uses machine learning to learn from its own mistakes.

4 Auto-Scaling
Automatically scales compute resources when needed by workload. All scaling occurs online, while the application continuously runs. Enables true pay per use.

5 Automated Data Protection
Automatically protect sensitive and regulated data in the database, all via a unified management console. Assess the security of your configuration, users, sensitive data, and unusual database activities.

6 Automated Security
Automatic encryption for the entire database, backups and all network connections. No access to OS or admin privileges prevents phishing attacks. Protects the system from both cloud operations and any malicious internal users.

10 Automatic Failover
Automatic failover with zero-data loss to standby. It's completely transparent to end-user applications.
Provides 99.995% SLA.

7 Auto-Backups
Automatic daily backup of database or on-demand. Restore or recover a database to any point-in-time you specify in the last 60 days.

8 Auto-Patching
Automatically patch or upgrade with zero downtime. Applications continue to run as patching occurs in a round-robin fashion across RAC nodes or servers.

9 Automated Detection and Resolution
Using pattern recognition, hardware failures are automatically predicted without long timeouts. IOs are immediately redirected around unhealthy devices to avoid database hangs. Continuous monitoring for each database automatically generates service requests for any deviation.

Copyright © 2026, Oracle and/or its affiliates

How does the Fully-Managed capabilities of Autonomous AI Database benefit you?

- Makes it trivial to patch and upgrade thousands of databases
- Removes need to track versions ✦ one-off patches for every database
- Automatically deploys critical security bug fixes into production databases as soon as they are available
- Simplifies planning of hardware capacity for workloads to meet all future business requirements
- Simplifies maintaining and testing disaster-recovery infrastructure
- Fully automates processes for database lifecycle operations
- Automatically files service requests ✦ gather all diagnostics information for every database issue
- Significantly reduces operational and licensing costs

Welcome to the future: Autonomous AI Database

Autonomous AI Database Self-Service Data Management

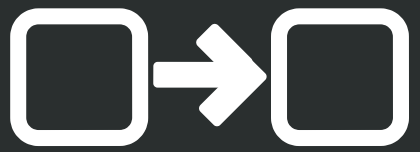

DBOps with OCI console or APIs/Terraform

Provision

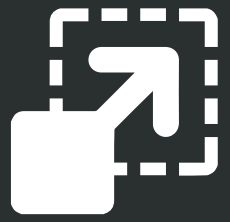

Provision databases in minutes

Clone

Clone any size database within same or cross-region
Refreshable clone read replicas

Elasticity

Instantly scale CPU and Storage and save costs using Auto-scale

HA/DR

99.95% SLA with built-in RAC

99.995% SLA with local and cross-region A-DG

Data Load

OCI Object-store, AWS S3, Azure, Google file store…

APIs

PLSQL Cloud APIs for OCI

No password access to OCI/AWS

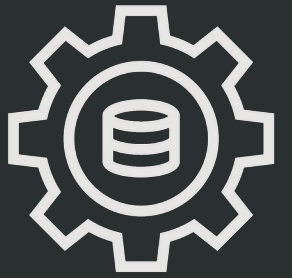

Security

Highly secure,

Integrated Data Safe

Metrics/Events

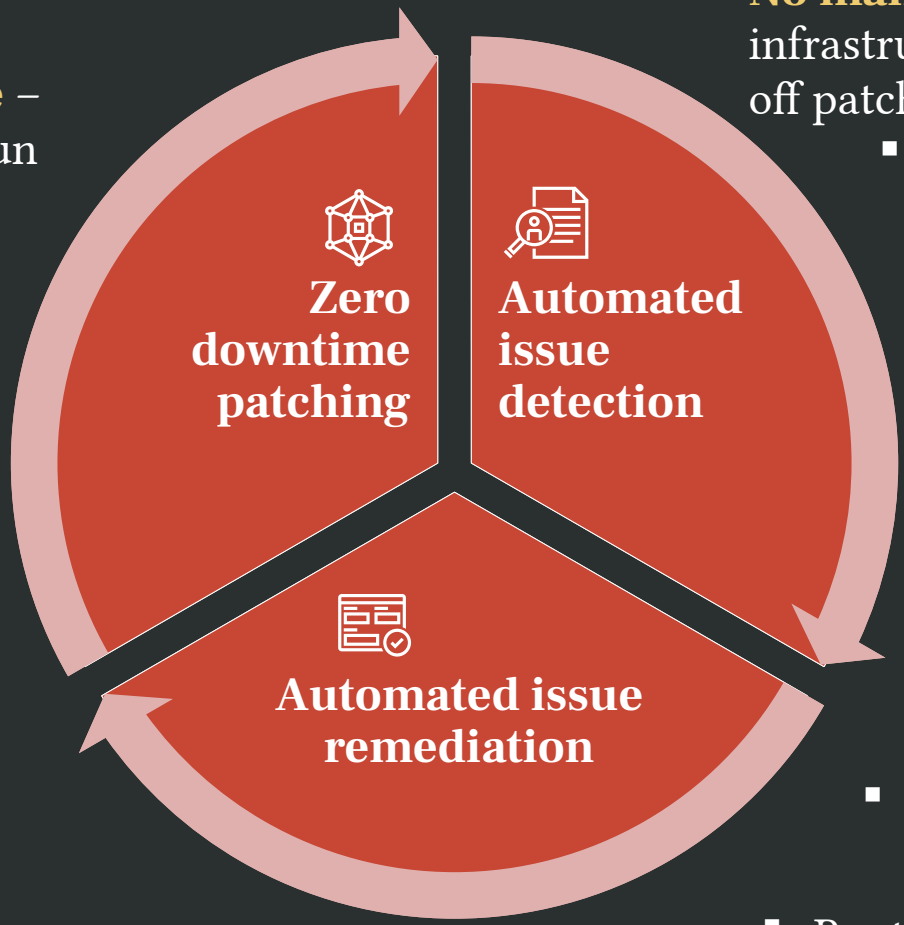

Manage based on exceptions and get notified for issues

Copyright © 2026, Oracle and/or its affiliates

Automated security and bug fixes - Auto-patching

Reduce costs and risks of manual patching

- **Zero downtime and no interruption of service** – all systems continue to run
- Continuous testing of fixes through CI/CD pipeline
- Early patch access (preview & test)

- **No manual patch management** for infrastructure, release update or one-off patches
  - Continuously monitors the entire infrastructure for security issues and bugs
    - Automatically generates Service Requests for each issue

- **88% of issues are automatically resolved** with **zero customer actions**
  - Immediate investigation and resolution by Cloud Ops
- Root-cause analysis for every issue

Reduce risks with always-on security

Start with strong perimeter controls

Secure by default

- Customers are unable to disable security configurations
- No access to O/S, only access to database

Always up-to-date security patches

- Eliminates the largest security risk in current customer-managed systems

End-to-end encryption

- Full encryption for entire database, backups and all network connections

Infrastructure-level network isolation

- Customer Controlled CIDR
- Private or Public Subnet
- Security Lists and Gateways
- Network Security Groups, fully-managed firewalls

Cloud compartment/IAM controls

- LOB separation of duties
- Granular access controls to all ADB resource types

Customer configurable Access Control Lists

- ADB level isolation
- custom IP Address lists
- CIDR ranges

Database auditing always on

- Login failures and modifications to user accounts or database structures recorded
- No highly privileged access (system/sysdba/sysoper)

Copyright © 2026, Oracle and/or its affiliates

Autonomous AI Database 26ai Security Enhancements

In-Database Firewall

An easy-to-use firewall solution, with minimal perf and operational overhead

Built-in to ensure it cannot be bypassed

Protection against attacks by monitoring and blocking “unauthorized SQL” and SQL injection attacks

Read-Only Users

Users may be created as, or altered to, READ ONLY status (default READ WRITE)

```
ALTER USER joe
READ ONLY;
```

Read-only users can not insert or update data, nor can they create database objects

Developer Role

It’s complex to grant all the privileges developers need to create, debug, etc.

Now it’s simple using the new DB_DEVELOPER_ROLE :

```
GRANT
DB_DEVELOPER_ROLE
TO    scott;
```

Schema Privileges

Managing the privileges on all the tables, views, and procedures used by an app can be tricky

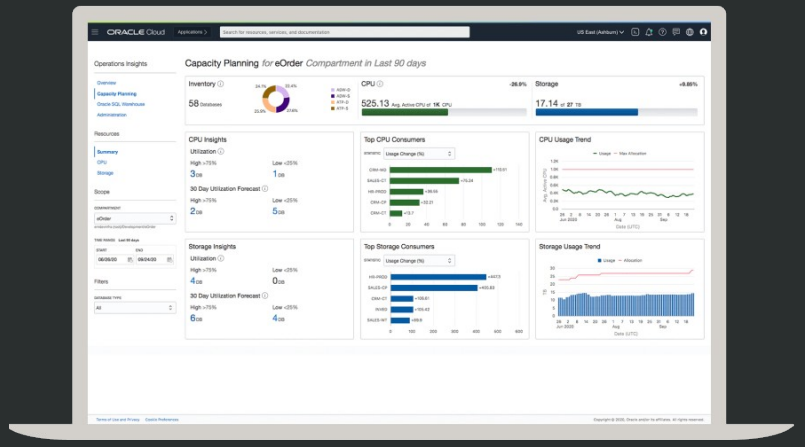

Now this is simple using GRANT on a schema

```
GRANT SELECT ANY TABLE
  ON SCHEMA sales
  TO mary;
```

Copyright © 2026, Oracle and/or its affiliates

Automated management creates ability to manage by exception

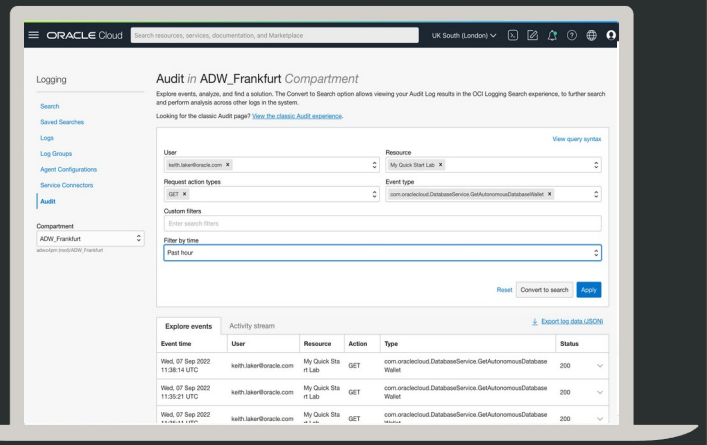

OCI Events

Notifications for key events:

- Maintenance windows
- Password expiration
- Logon from new IP address
- Dozens of others….

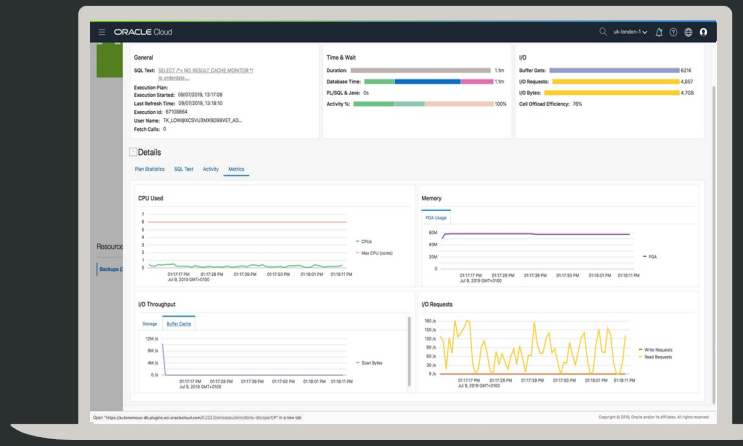

Service Metrics

Alarm-based monitoring of key service metrics:

- CPU utilization
- Storage utilization
- Number of sessions

Performance Hub

Monitor real-time and historical SQL performance:

- Session history
- SQL Monitoring
- Workload Repository

Summary: Traditional Responsibilities of the Database Administrator

Tasks and responsibilities to **generate business value**

- Architecture, planning, data modeling
- Data security and lifecycle management
- Application related tuning
- End-to-end service level management

Tasks and responsibilities for **maintenance and administration**

- Configuration and tuning of systems, network, storage
- Database provisioning, patching
- Database backups, H/A, disaster recovery
- Internal helpdesk and call center

Copyright © 2026, Oracle and/or its affiliates

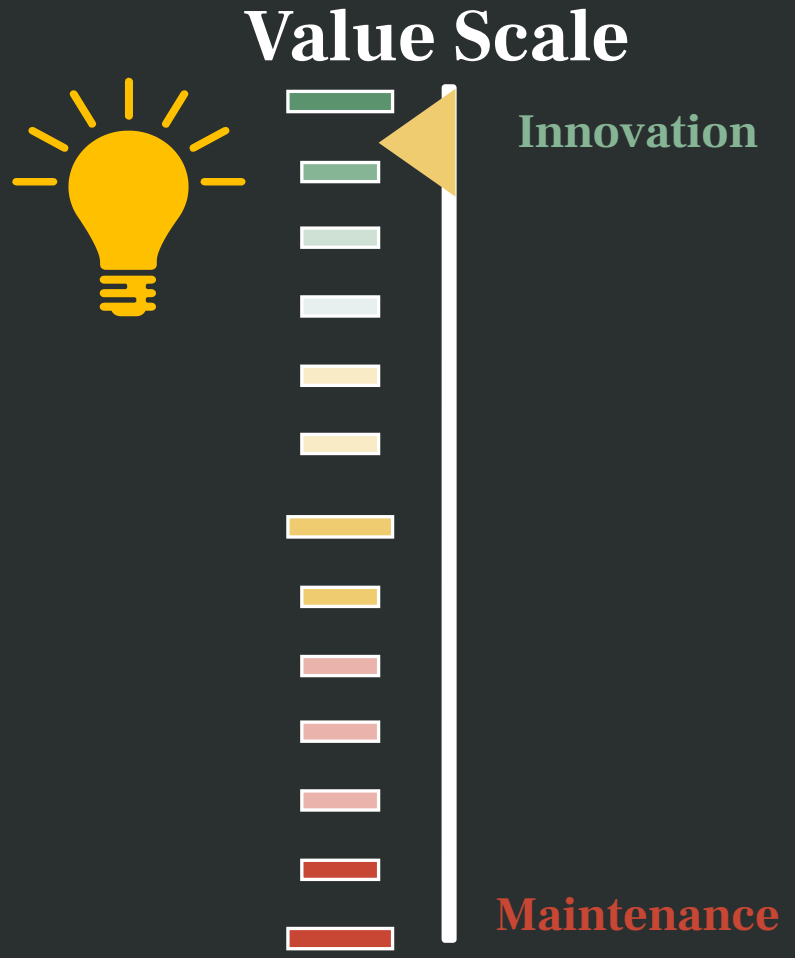

Summary: Traditional Responsibilities of the Database Administrator

Tasks and responsibilities to **generate business value**

Autonomous AI Database is Workload-optimized

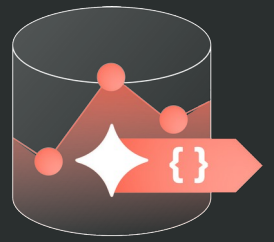

Autonomous AI Lakehouse

Pre-configured for columnar format, partitioning, and large joins to accelerate **analytics**, **data warehouse**, and **data lakes** **including Iceberg data**

Autonomous AI Transaction Processing

Pre-configured for row format, indexes, and data caching to accelerate **transaction processing** and **mixed workloads**

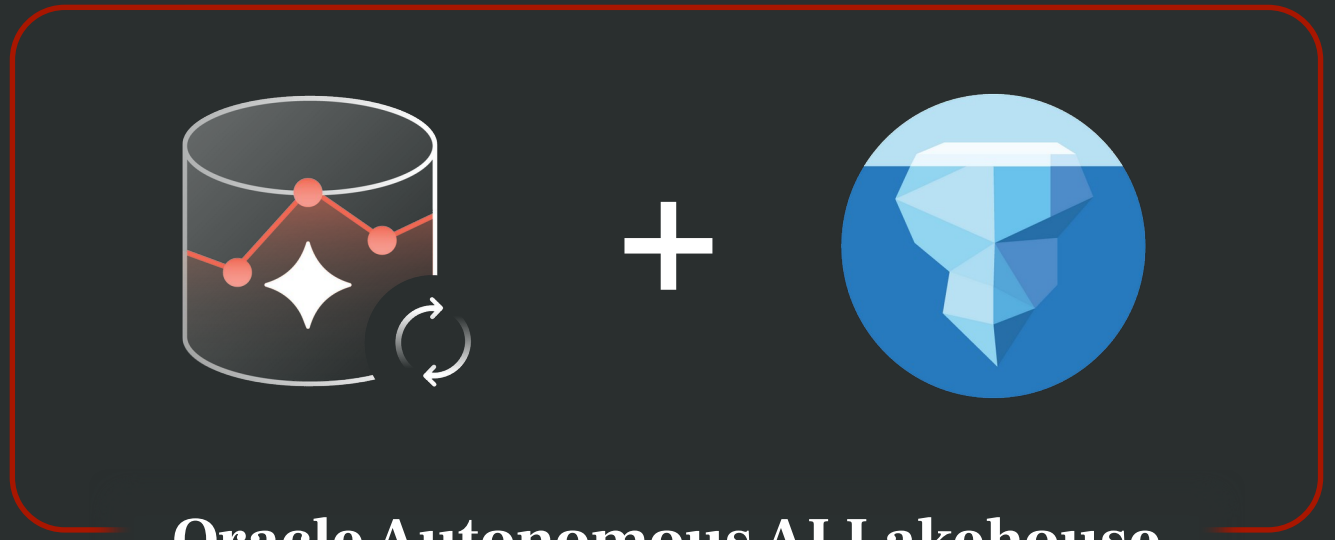

Autonomous JSON Database

Price optimized for transactions and analytics on **JSON** data, includes MongoDB compatible API

Copyright © 2026, Oracle and/or its affiliates

Oracle Autonomous AI Lakehouse Vision

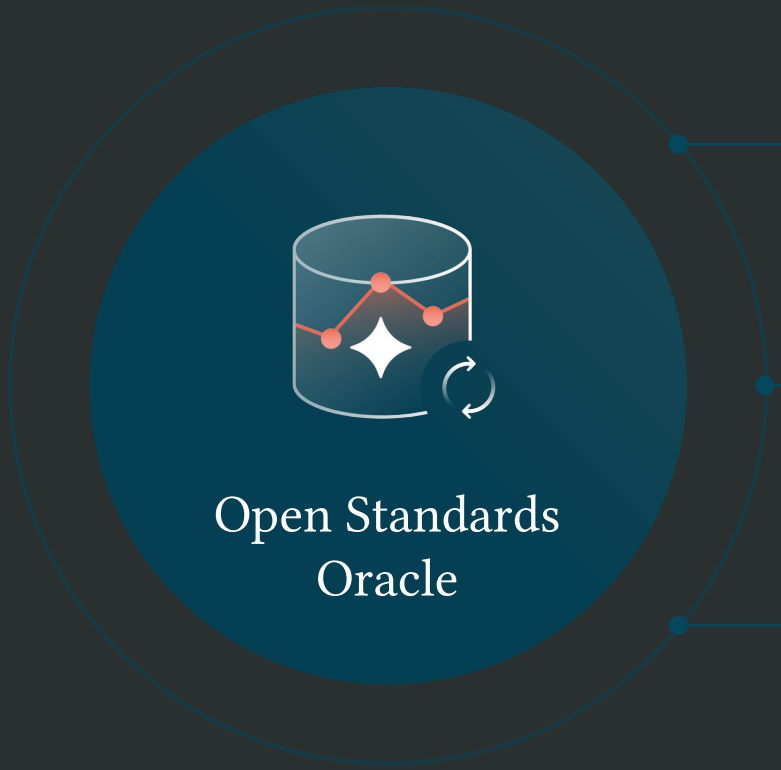

Enterprise-wide AI & analytics with the best of Open Table **Iceberg** Data Lake PLUS the best of **Oracle**

Copyright © 2026, Oracle and/or its affiliates

Oracle has long been the most capable data platform

Leader in analytics and transactional processing

Oracle relational tools and applications
Data apps and tools

AI Database
Data access

Oracle Exadata
Data storage

Converged Data Architecture
supports all leading data types

Sophisticated secure analytic SQL
perfected over 45 years

Translytical
real-time, enterprise workloads

Broadest ecosystem
of tools and apps

Exadata storage
Extreme-performance, for same price as object store + no cost per IO

Copyright © 2026, Oracle and/or its affiliates

Open table formats such as Apache Iceberg enable open data platforms

Tools and apps using open-source ecosystem

Data apps and tools

Apache Spark (Python, Scala, SQL)

Data access

Iceberg tables on object storage

Data storage

Popular with data science and AI communities

Open-source analytics engines
such as Spark and Flink, to process data

Open data formats
Parquet, CSV, JSON, Avro, Delta UniForm, Iceberg

Broadest ecosystem
of tools and apps

Object storage
Highly scalable and low-cost

Oracle Autonomous AI Lakehouse

Delivers the best of both worlds—powerful plus open

Oracle now brings its **performance, reliability, and AI** to Iceberg with zero data movement

A **complete** Lakehouse platform that is **open** so you can bring the power of Oracle to your existing Lakehouse

Fully managed, **autonomous operations** eliminate administrative overhead

+

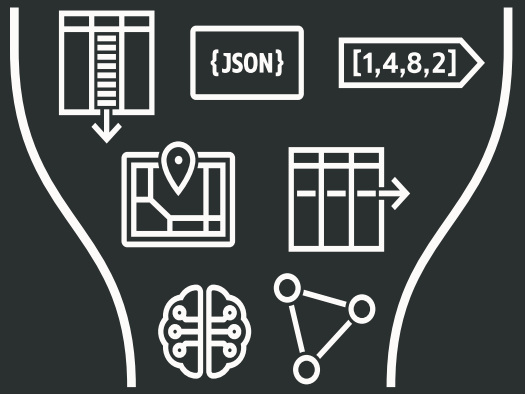

Power of Oracle AI Database

Converged Database platform for all types of applications

"Simple" databases that fragment the App architecture create endless Dev and Ops Challenges

Oracle Autonomous AI Database

Apps simply call SQL for any data type or workload

Allows Developers to Focus on Innovation

Other Cloud Vendors

Apps must use many single-purpose proprietary databases, one for each data type and workload

Aurora
OLTP

DynamoDB
Key-value

OpenSearch
Elastic Search

QLDB
Ledger

Redshift
Data Warehouse

Neptune
Graph

Timestream
Time Series

DocumentDB
Document

Requires Developers to Focus on Integration

Simplest For Running ALL Apps

Autonomous Database makes it **simple** to run **all** apps regardless of complexity, scale, criticality, or sensitivity

Autonomous AI Database

All Apps Transparently Benefit from Ultra Mission-Critical Database Technologies

- **Exadata**
- **Transparent Scale-out**
- **Transparent Data Security**
- **Transparent Availability**
- **Transparent Patching**

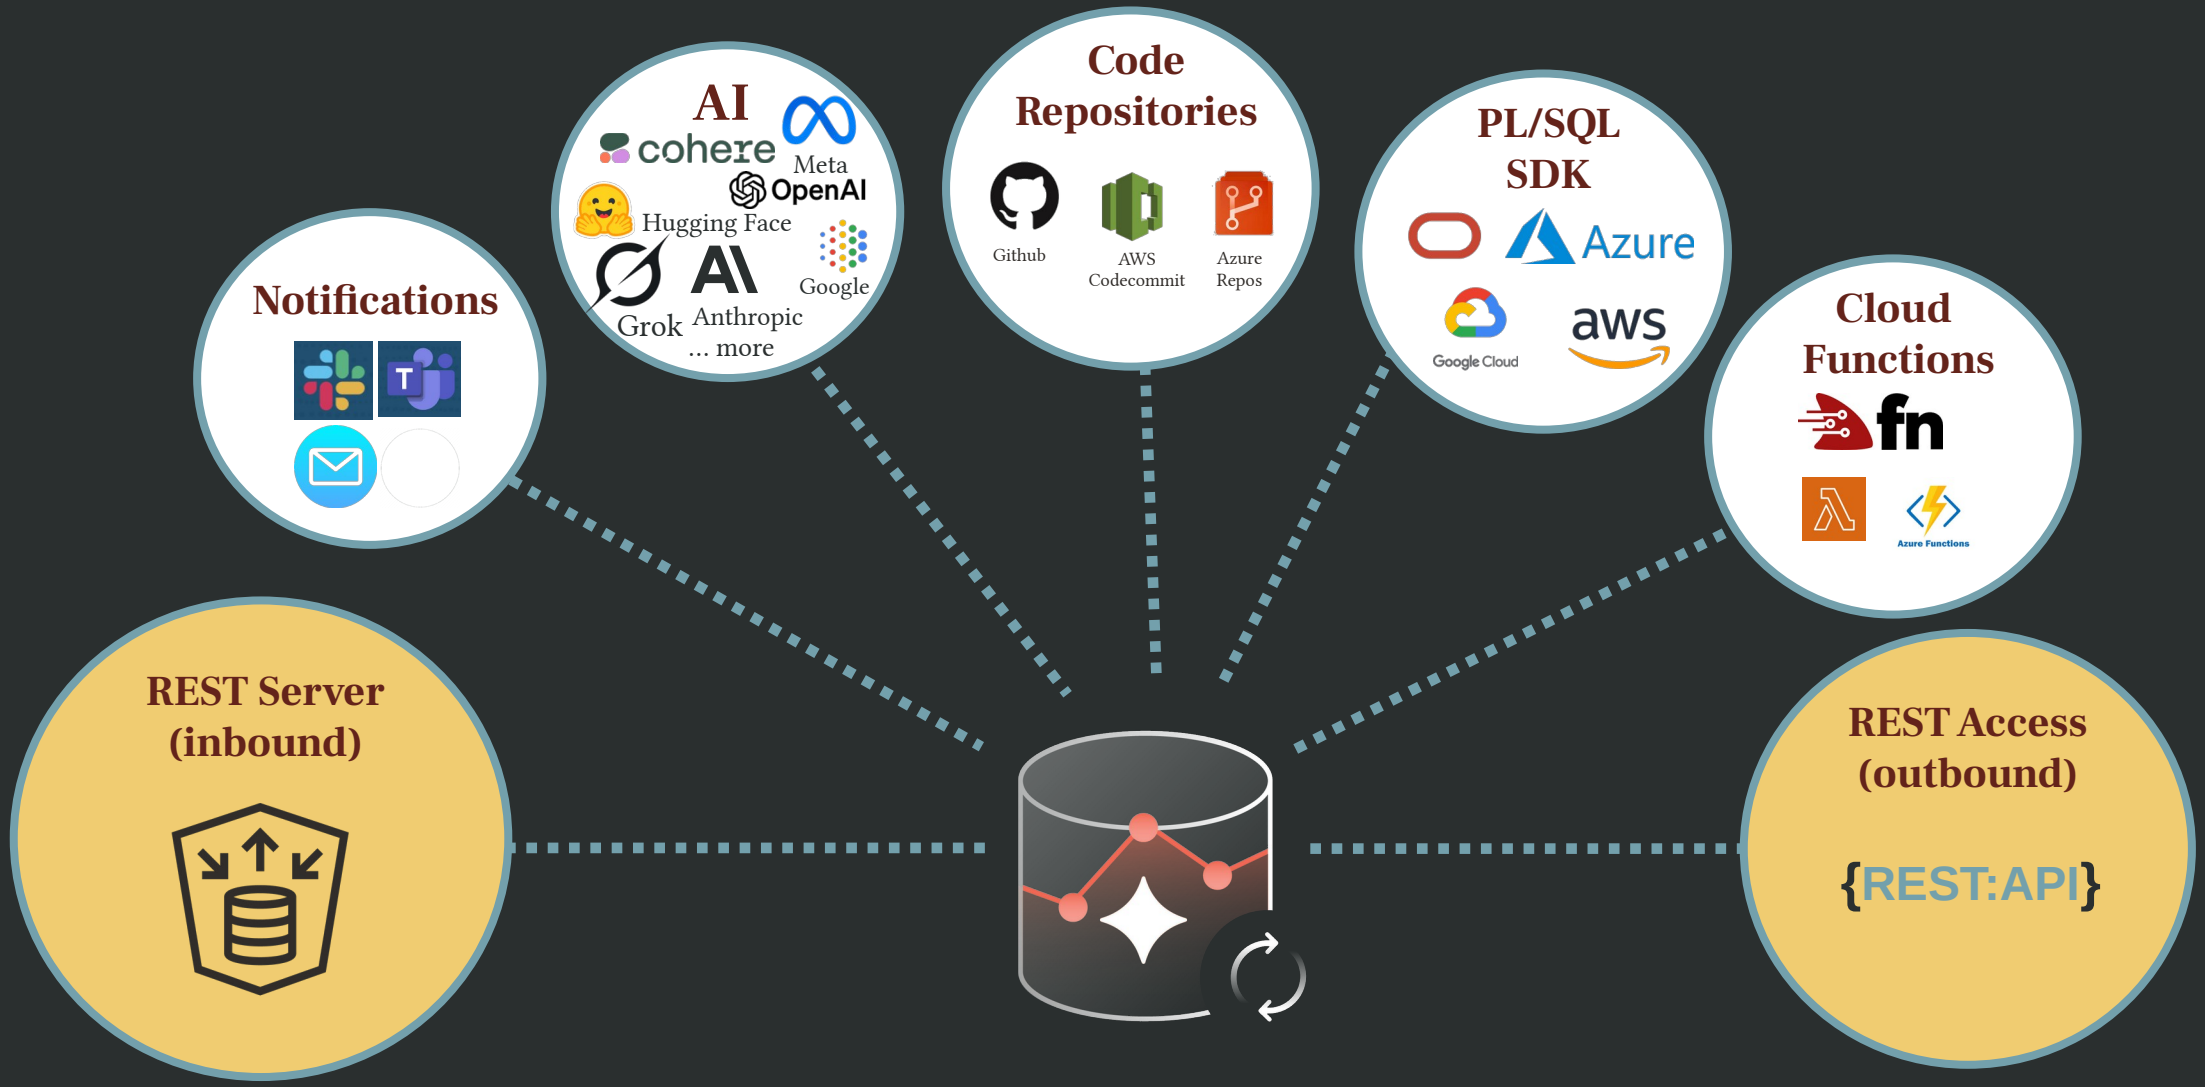

Data Management is Simple Even for Ultra-Sophisticated Apps

- ORACLE Siebel
- ORACLE PeopleSoft
- ORACLE JD Edwards
- ORACLE E-Business Suite

Uniquely provides stock-exchange level performance, availability, and security transparently to ALL apps

Copyright © 2026, Oracle and/or its affiliates

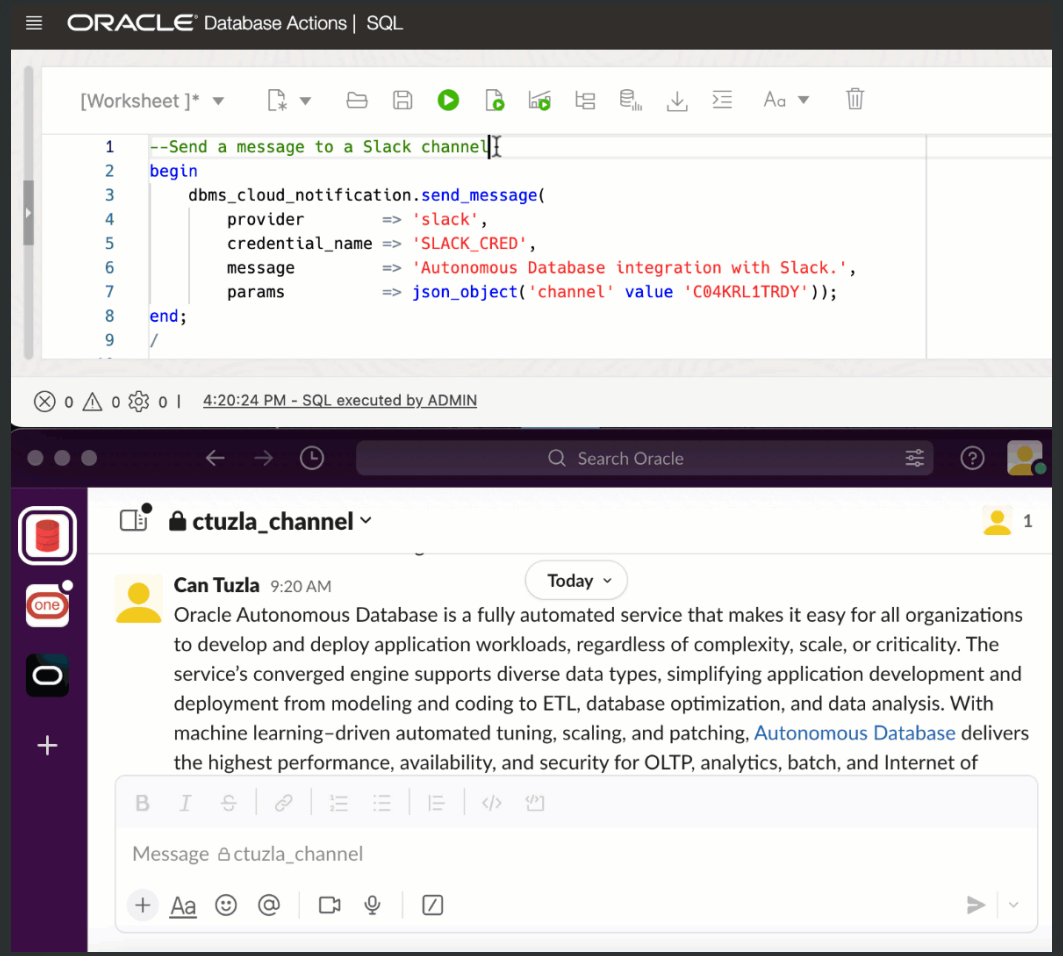

Cloud-Native Application Development with Autonomous AI Database

Copyright © 2026, Oracle and/or its affiliates

Example: Integration with Slack

(Integration with Microsoft Teams also available)

Send messages directly to Slack

- Query Results
- Text Messages

Example usage:

- Operational notifications and alerts
  "Daily load job is complete"
- Data reports and alerts
  "New customer order from ABC Corp: $10,000"

•Slack messages can be sent from any database function or procedure

AI-enhanced data loading

Automatically derive insights

- **PII detection**
  Secures sensitive information
- **Sentiment analysis**
  Analyzes customer emotions
- **Key phrase extraction**
  Identifies the most important words and phrases

Copyright © 2026, Oracle and/or its affiliates

We provide Plug & Play Access to Iceberg

Immediately query any Iceberg Table

- Use any Iceberg catalog: Databricks Unity, Snowflake Horizon, AWS Glue
- Or one-command setup for **Iceberg** Tables in object storage

Simple SQL syntax: schema.table@catalog

```
SELECT
  Customer_Name,
  ...
FROM
  Marketing.Promotions@Databricks
WHERE
  Promotion_Date = '01-October-2025'
```

Oracle Autonomous AI Lakehouse

Run AI and analytics securely on all your data without lock-in

Live AI hub for all your real-time data

- AI insights on real-time data stored anywhere—either in Oracle on third-party sources
- No data movement

Bring best of Oracle to new or existing data lakes

- Power of Oracle Analytics and AI on existing data lakes
- No data movement
- Iceberg and Delta Lake Support

Run AI and analytics at any scale on all data types

- Unified multi-modal database engine
- Reduces application complexity

Always available always secure

- 99.995% availability
- Role-based Access Control
- Deep Data Security
- Data Governance

Power data analytics with self-service Data Studio

Built-in data load and integration

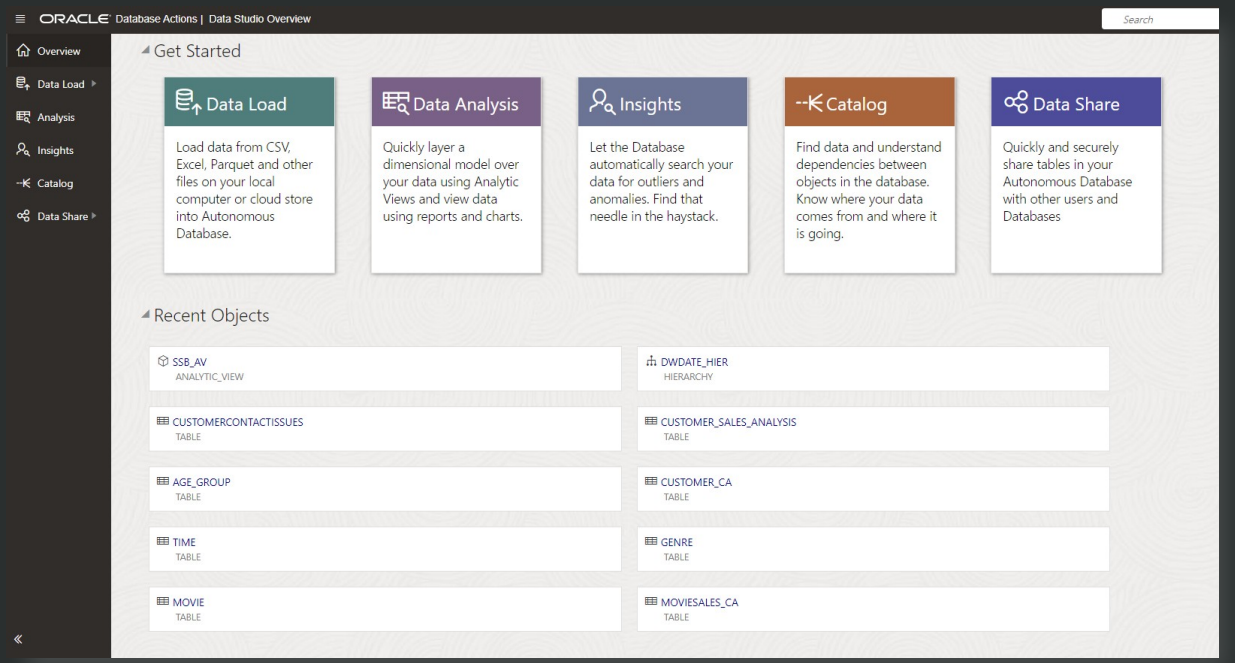

- Load data from virtually anywhere
- Transform and prepare data for analytics with drag-and drop data integration powered by Oracle Data Integrator

Easy data modelling and sharing

- Easily model data for optimized and consistent analytic queries
- Share data securely with other groups, partners and customers

Reduce cost and complexity

- No need to set up or learn another service for data integration
- Autonomously managed alongside the database

Copyright © 2026, Oracle and/or its affiliates

Data Marketplace in Autonomous Database

Explore data products, collaborate across your organization and beyond

- Easily explore available datasets
- Import the datasets directly into your database with one click
- Add your own datasets to the marketplace and collaborate with everyone in your organization

Copyright © 2026, Oracle and/or its affiliates

What is Autonomous AI Database?

1 **Fully Managed**

No administration required

2 **Lakehouse and Data Tools**

Everything for data-driven applications in one service

3 **Included AI Capabilities**

Built-in SELECT AI for NL2SQL, RAG and Agentic requirements

4 **Cloud Native**

Elastic scalability and built-in cloud integrations

Copyright © 2026, Oracle and/or its affiliates

Bring AI to Data

MACHINE LEARNING

- **Build and train models** directly where your data lives.
- **Eliminate data movement** to reduce cost and security risks.
- **Predict outcomes** faster using scalable processing.

NL2SQL

- **Chat with your data** using natural language.
- **Empower business users** to get answers without learning SQL.
- **Generate instant insights** from complex enterprise data.

RAG

- **Ground Generative AI** with your private, real-time data.
- **Manage all data types** (structured, vector, unstructured) in one platform.
- **Support enterprise security** while adopting LLMs.

AGENTS

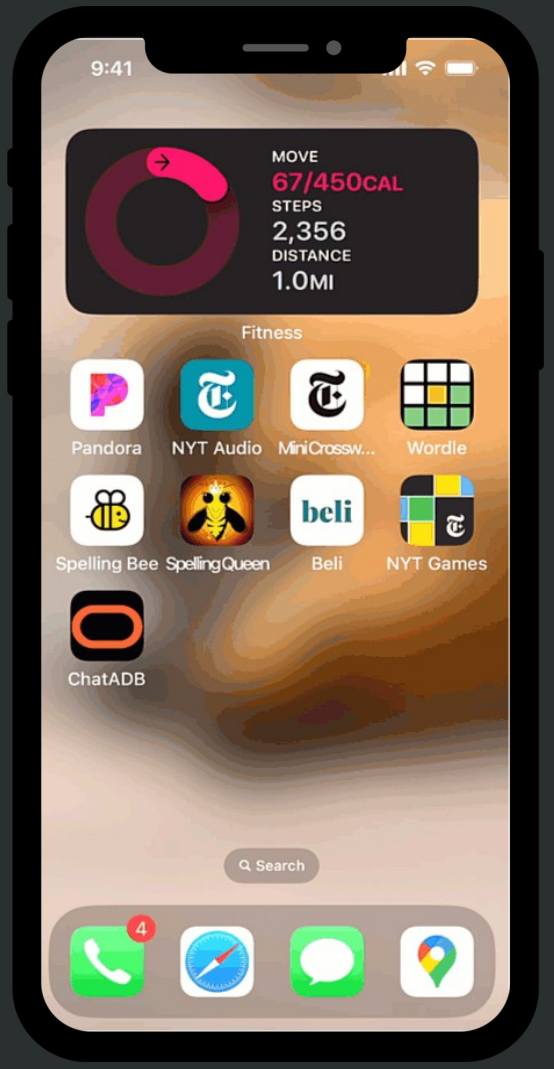

- **Turn insights into action** with autonomous AI agents.
- **Execute complex tasks** through multi-step reasoning.
- **Drive business efficiency** with "smart" assistants that do the work.

Copyright © 2026, Oracle and/or its affiliates | Forrester Lakehouse Wave Briefing 2026 | All content is confidential and shared under NDA

Autonomous AI Database Select AI

The simplest way to get answers about your business

Use your language to query and analyze data.

There's no need to understand where and how your data is stored to gain insights.

https://github.com/oracle-devrel/oracle-autonomous-database-samples/tree/main/apex/Ask-Oracle

Easy to extend and build new natural language apps

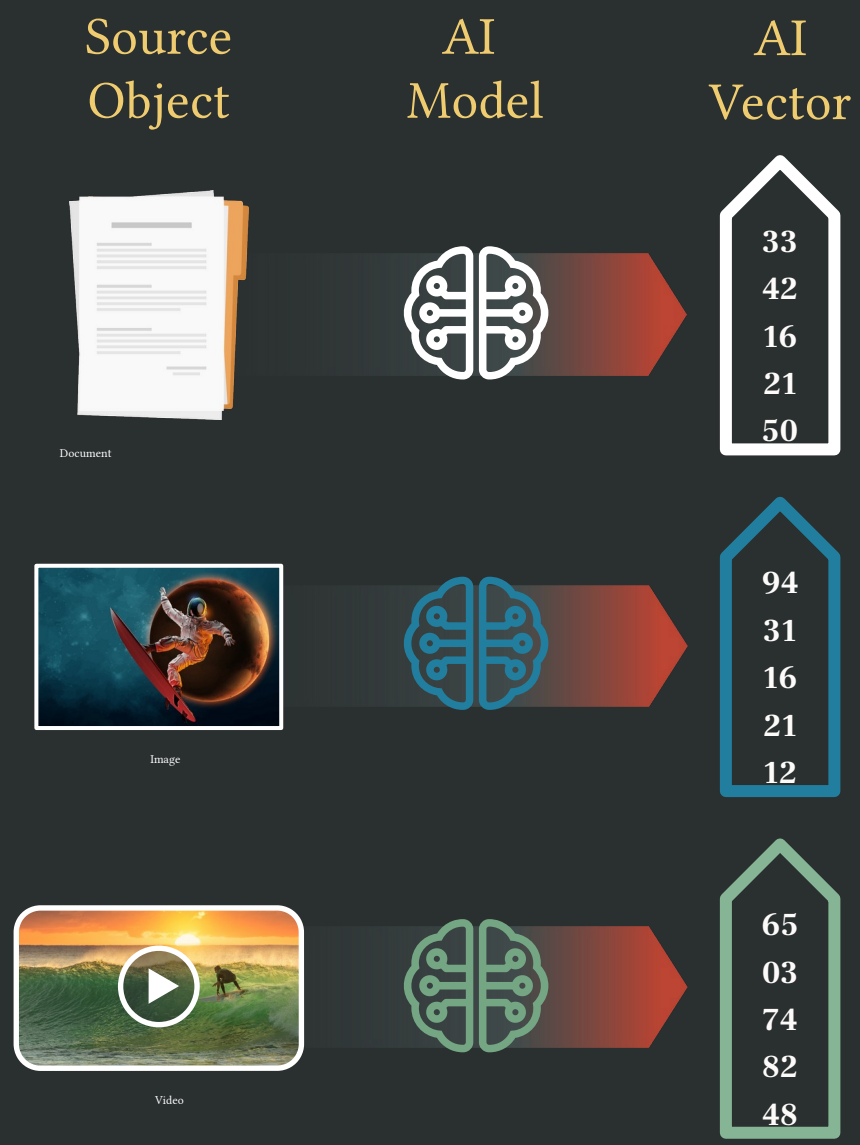

Use a standard SELECT statement followed by AI and your question.

Process the result as you would any other SQL result set.

Copyright © 2026, Oracle and/or its affiliates

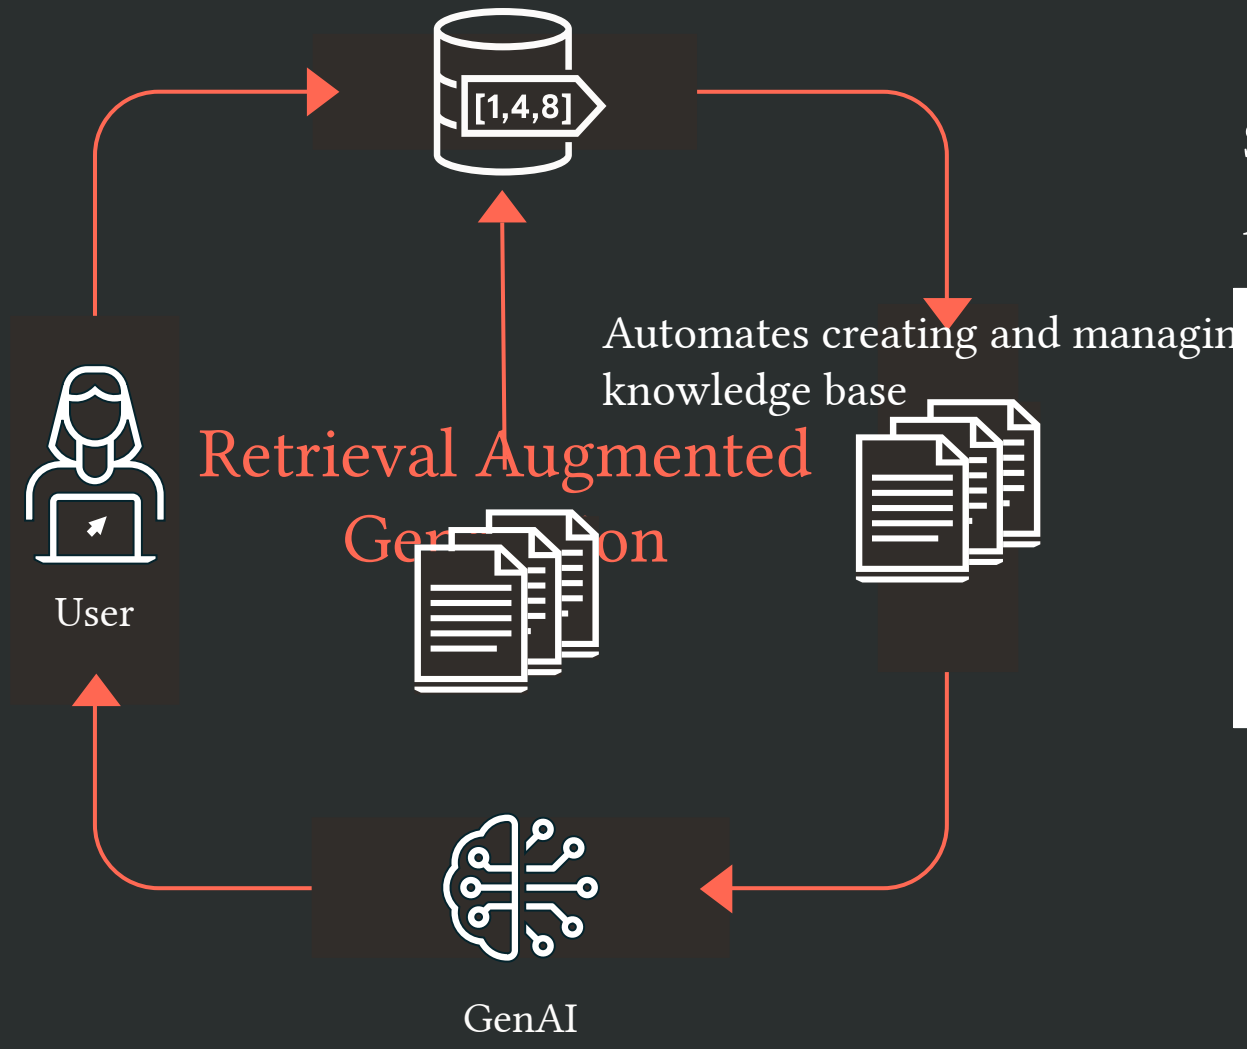

Key new AI data type: AI Vector

Stores semantic content
of a complex object, and it's essential
for **RAG** (Retrieval Augmented
Generation)

Copyright © 2026, Oracle and/or its affiliates

Select AI simplifies the entire RAG process

Simplifies response generation using SQL AI extension

```
SQL> SELECT AI NARRATE my roku is stuck on the opening scene of my movie ;

It seems like you're experiencing an issue with video playback on your Roku device.
 Based on the troubleshooting guides provided, I'd recommend checking the following
:

1. Ensure your internet connection is stable.
2. Refresh the video page or restart the video player.

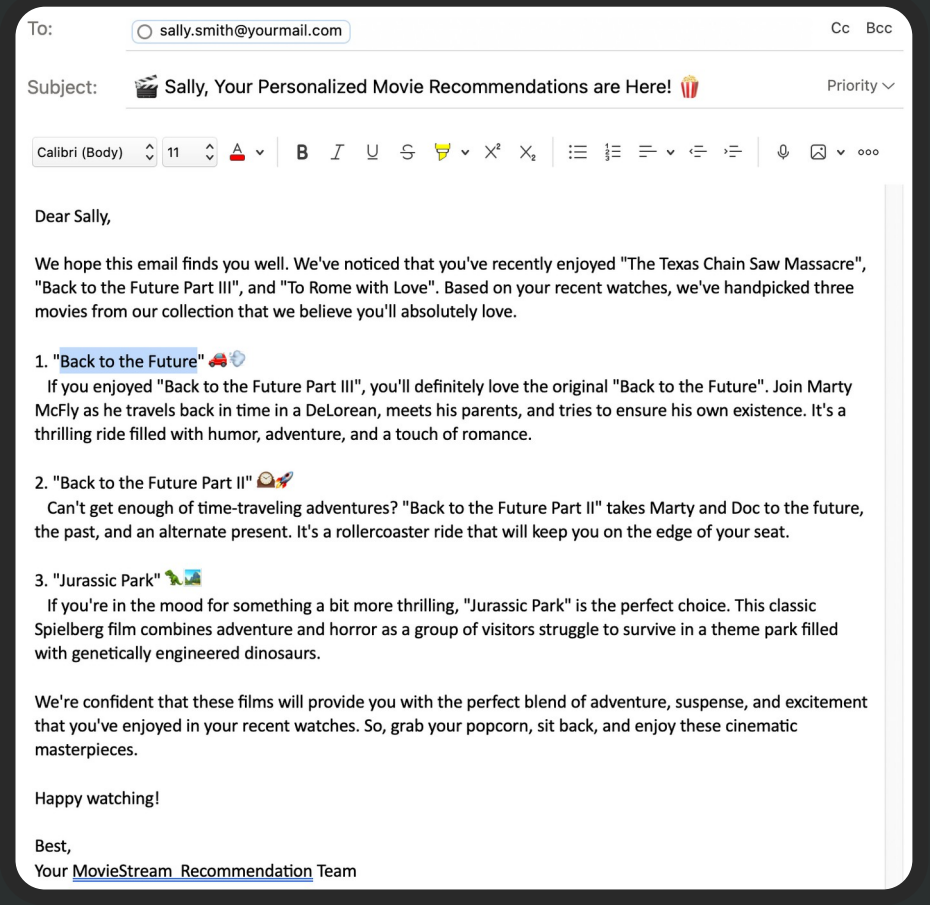

If the issue persists, try playing a different video to see if the problem is speci
fic to the current movie or a general issue with the video player.

Control the scope of data access for natural language queries

Use **Select AI Profiles** to identify target data sources

Use one or more Select AI profiles to **define the scope of your natural language data sources**

- Completely flexible: use profiles to match your business requirements
- A profile can include an entire schema or specific table and/or views
- A profile an also point to a vector index used for RAG

Oracle security policies **enforce data access rules**

- Object privileges, virtual private database policies, etc. – all engage (like any other SQL query)

Copyright © 2026, Oracle and/or its affiliates

What can you do with Select AI?

A SQL and PL/SQL interface for leveraging generative AI with and from your database

Generate SQL specific to your database as a developer assistant

Build apps to interact with data using natural language

Generate RAG-enhanced results using vector search

Create applications using generative AI

- customer email generation
- recommendations
- sentiment analysis
- document summarization
- …and more

Build, deploy, and manage custom AI agents

Oracle Autonomous AI Database
with Select AI full functionality

Oracle Database 23.7✦
with Select AI NL2SQL

Copyright © 2026, Oracle and/or its affiliates

Easily create your own agent with Oracle AI Lakehouse

AI applications using all of your lakehouse data

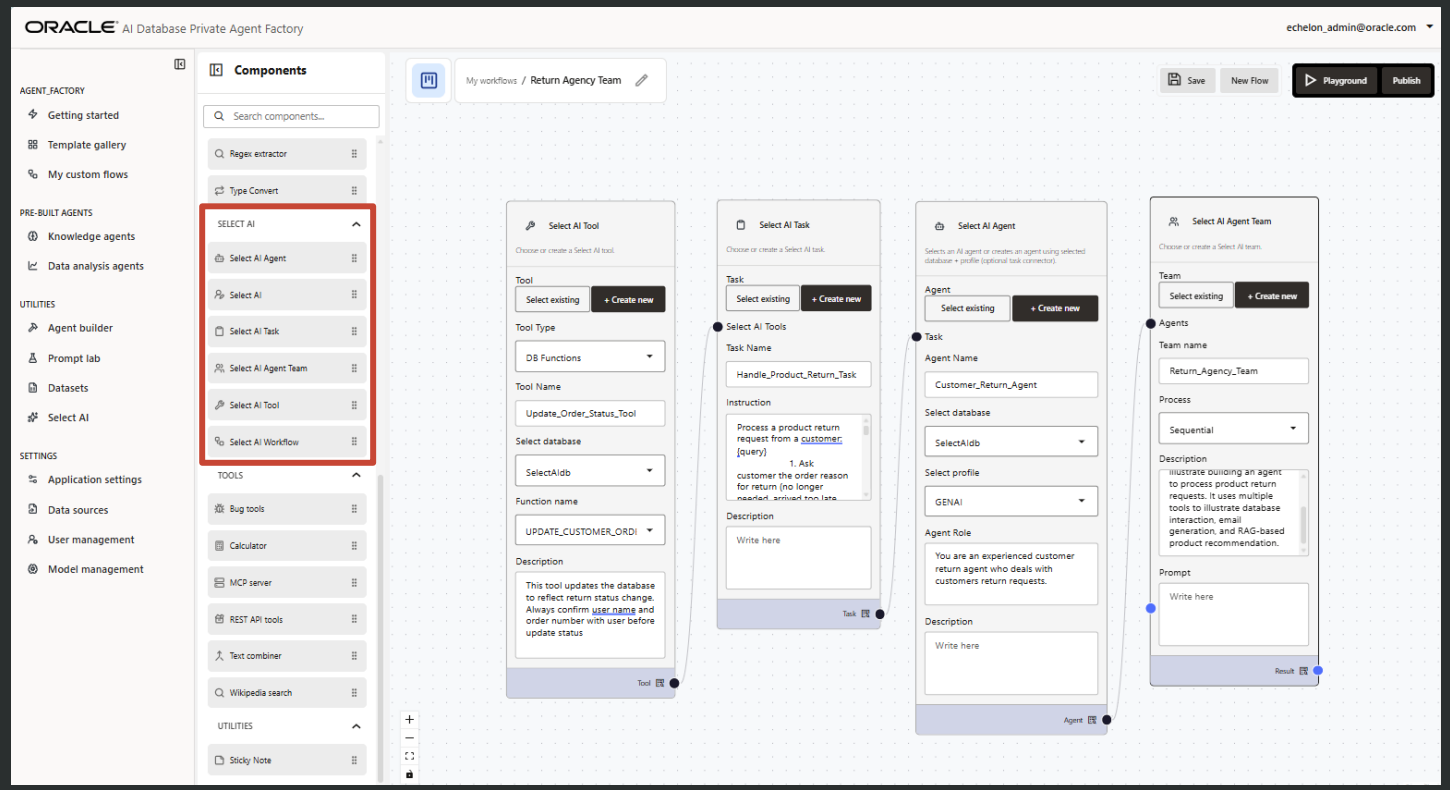

Private Agent Factory

Define in-database tools using Select AI Agents

- NL2SQL and RAG are basic examples
- Any database function can be published as a agentic tool

Develop agents using Agent Factory

- A no-code platform to rapidly build, evaluate, deploy, and operate intelligent AI agents securely and at scale

Copyright © 2026, Oracle and/or its affiliates | Forrester Lakehouse Wave Briefing 2026 | All content is confidential and shared under NDA

Oracle AI Database also includes specialized AI agents

Simplify Cloud Ops, Analytics and more

Agents for Cloud Ops

- Lifecycle Agent **for Database Management**
- OCI Vault Agent **for Security Management**
- Database Inspect Agent **for Knowledge**
- AI Database Assistant **for Diagnostics**

Agents for Analytics

- Data Science Agent for **Machine Learning**
- NL2SQL Data Retrieval Agent **for Analytics**
- Jira Insight Agent **for Issue Management**
- Cloud Repository Connector **for CI/CD**

Copyright © 2026, Oracle and/or its affiliates | Forrester Lakehouse Wave Briefing 2026 | All content is confidential and shared under NDA

No administration required

2 **Lakehouse and Data Tools**

Everything for data-driven applications in one service

3 **Included AI Capabilities**

Built-in SELECT AI for NL2SQL, RAG and Agentic requirements

4 **Cloud Native**

Elastic scalability and built-in cloud integrations

What can Autonomous AI Database do for you?

Simplify, Secure and Modernize Data

Lower costs

- Lower costs using one fully automated database
- Automated database admin
- One database service for every workload
- Scale elastically and pay only for what you need

Minimize Risk

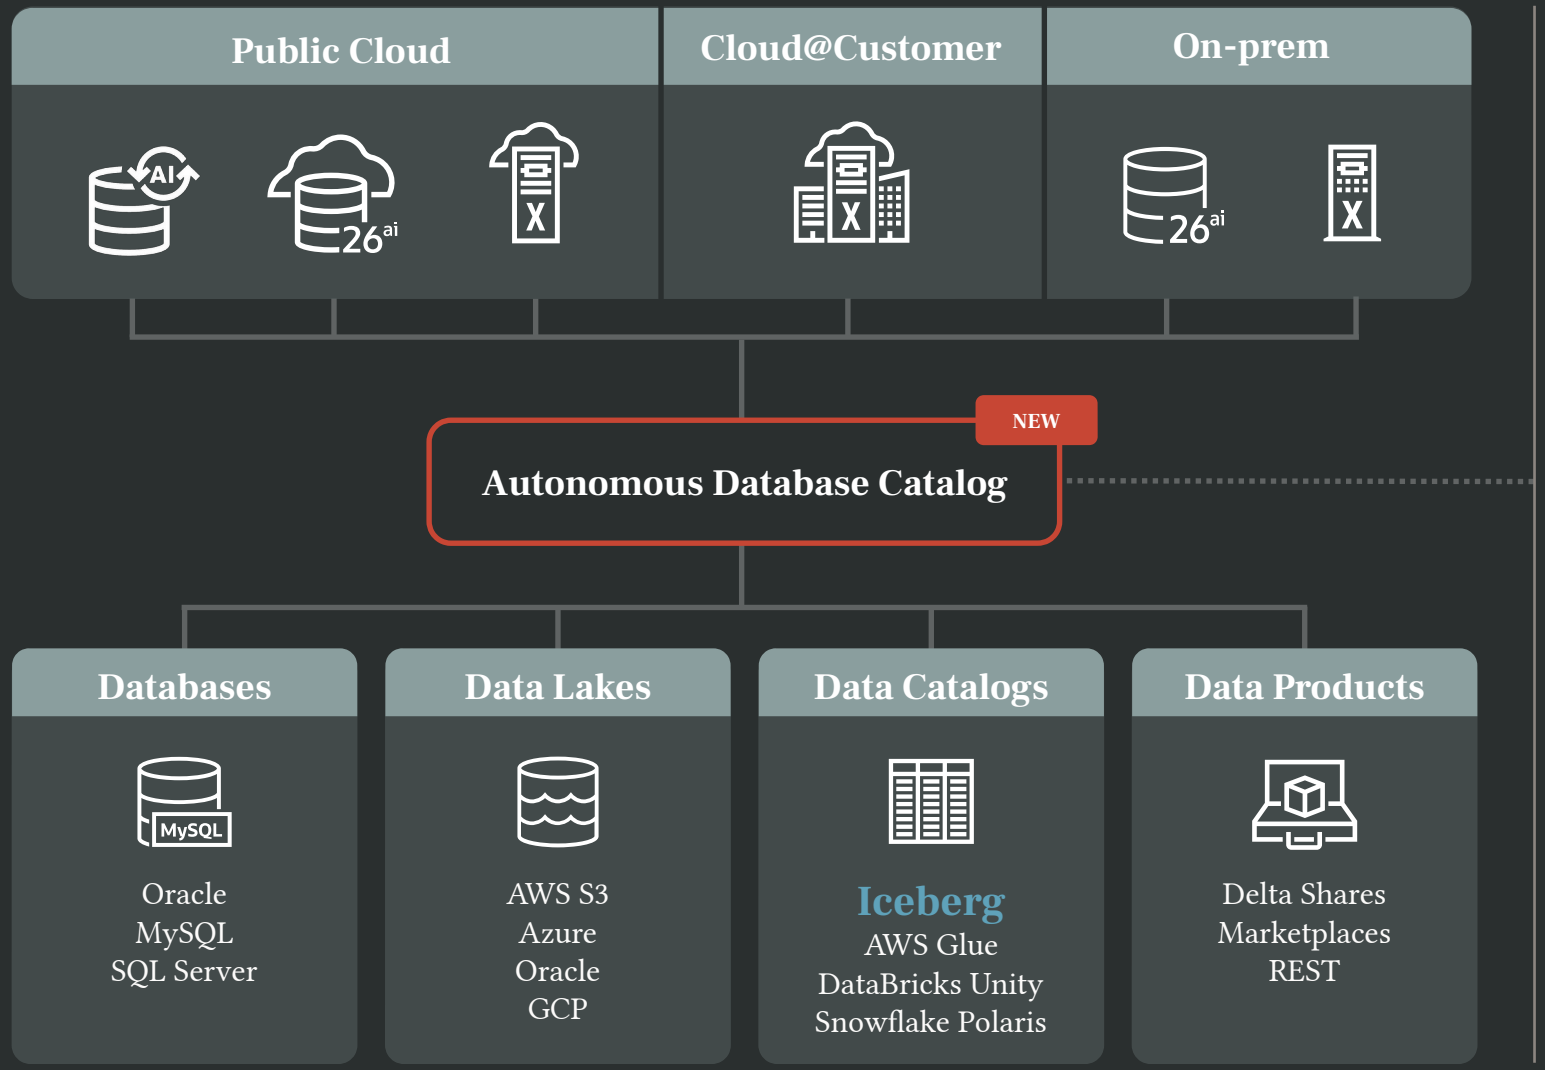

- Minimize data security risks and downtime
- Automated threat detection and response
- 99.995% application availability
- Automation reduces security and downtime risks

Empower Developers

- Empower your developer community and business teams
- Query data with natural language
- Use AI on all of your data with AI Vector Search
- Build and manage AI Agents, including pre-built ones like a Data Science Agent

Roadmap: Search, discover and access any data using any Oracle Database

Autonomous Database Catalog opens up Iceberg access to **every** Oracle Database

- Autonomous AI Database
- On-prem
- Cloud@Customer
- Public Cloud

Oracle Autonomous AI Lakehouse

Run AI and analytics securely on all your data without lock-in

Open and interoperable

- Open by design with Apache Iceberg
- Runs everywhere

Lakehouse without compromises

- The openness of Iceberg with the performance, reliability and trust of Oracle
- Extend existing warehouses to lakehouse architecture

AI-powered operations

- Operationalize AI insights directly in business operations
- Built-in AI, analytics, and security across **all** data

Complete and Comprehensive on OCI or multicloud

AI Data Platform

Gen AI | Autonomous AI Lakehouse | Open-Source | Analytics

- Unified Lakehouse on OCI combining open-source engines like Spark with Oracle AI Database
- Modernize on-premise Oracle Data Warehouse(s) with **Autonomous AI Lakehouse** on OCI

Pick Your Journey

Autonomous AI Lakehouse

- Modernize on-premise Oracle Data Warehouse(s) on any Cloud
- Extend existing Lakehouse (Databricks, Snowflake, MS Fabric, etc.) with Oracle and **Iceberg**
